Cyber 2.0

Prevents the spreading of Cyber-attacks

and actually solves the most important problem of Cyber Defense
We focus only on that, and we do it better than any other Cyber company

	Other Cyber Companies	Cyber 2.0
Detection 🔍	First, try to identify **every** malicious software	We don't have to identify **any** malware
	They can't ensure 100% detection because of new and unknown cyber-attacks that are popping up every moment	**We don't miss any new attack** Actually, we bypass this challenge
	They are based on **Black List**	We are based on **Zero Trust**
Prevention 🛡️	Then, they try to prevent them from spreading **They can't ensure 100% prevention**	We prevent cyber-attacks from spreading **We guarantee full protection**
	Because they can't **prevent the spreading** of any malware that they didn't detect	We **don't prevent** malware and unrecognized software from going out
	They block the detected malware on the **infected computer**	We block every unrecognized software on the **receiving** computers
	Once their systems have been removed from this computer, **the organization is no longer protected**	Even if Cyber 2.0 is removed from the infected computer, **we continue protecting the organization** *(PATENTED)*
The Model	Their system is based on **biological** model (The terms they use are virus, anti-virus, mutation)	Our system is based on **mathematical-chaos** model (The terms we use are Reverse Tracking, Port Scrambling)
	This model is **vulnerable**	This model **can't be breached**
	The hackers will always be one step ahead	**We** will always be one step ahead
Proof of Concept	**They are not really willing to commit**	**We are willing to commit**
	and to put their system to the test of all the hackers in the world	and invite all hackers to hack our system for a reward of $ 100,000 Over 8,000 hackers from 30 countries failed Watch: CBS, NBC
Reports	**Too many reports** Too many false positives	**One automated report** only about the software that we block

Among Our Customers

Sea ports	Water systems	Army	Hospitals	Airports	Power
Ashdod Port Israel	GCWATX Texas Water System USA	Bet Shemesh Jet engine manufacturer	Kims hospital India	CVG Airport USA	Rapaq Electric Power Israel
